

Shrink Bundling Film

PE Collation Shrink Film for beverage, processed food, pet food, and similar markets to pack in bundling cases, multi-units, tall bottles, and more

Unprinted PE Collation Shrink Film with 50% Recycled Resin or 100% Virgin Resin

INDEVCO Plastics manufactures a sustainable Shrink Bundling Film comprised of 50% post-consumer recycled (PCR) resin; film from post-industrial recycled (PIR) resin is also available. Using recycled material allows us to reduce greenhouse gas emissions during production and aids in landfill reduction. The durability of this Shrink Bundling Film replaces the need for cardboard bases and trays and uses less packaging material than cardboard-based packaging.

INDEVCO Plastics Shrink Bundling Film packs products for maximum security with excellent puncture and abuse resistance, as well as tight bullseye closures for easy carry and handling. Available unprinted or print-ready, Collation Shrink Film provides an outstanding combination of creep resistance, strength, and high shrink force properties required for pallet and load stability.

This film offers consistent performance across machine types, including a wide variety of heat tunnels and is ideal for high-speed packaging lines. This Collation Shrink Film is tested for mechanical, optical, and processing performance.

A Sustainable Packaging Choice

30%–50% Recycled (PIR or PCR) Resins

The reduction of virgin material strengthens the circular economy of plastics

Downgauging for Raw Material Reduction

Keeping optimal performance while reducing excess material

100% Recyclable

This packaging can be entirely recycled to reduce waste going to landfill

Specifications

FILM SPECIFICATIONS

Material	Polyethylene with 100% virgin resins or 50% recycled resins
Lay Flat Width	Up to 102"
Gauge	1.0 mil - 7.0 mil
Density	0.928 kg/cm3 (for recycled blend)

ROLL DIMENSIONS

Core Options	Fiberboard & PVC
Inner Core Diameter	3" or 6"
Minimum Roll Diameter	20" or custom
Maximum Roll Diameter	48"

OPTIONAL FEATURES

Plain or print-ready film
C-fold for custom applications

Product Features

PACKAGE INTEGRITY

Learn how our Shrink Bundling Film is designed to take abuse. The film keeps multi-units tightly together with its high holding strength and creep resistance, keeping the content within safe and stable through even the roughest of handling.

EASY CARRY

Tight bulls-eye closures provide a way to easily carry multipack products to their final destination. Shrink Bundling Film allows for bottles and containers to be moved more efficiently than unbundled products, resulting in less trips to retrieve products.

HIGH OPTIC CLARITY

Keep multi-pack products on full display with unprinted Shrink Bundling Film and let the product inside advertise itself with exceptional film clarity or opt for print-ready film with a glossy appearance that can meet your customers' printing needs.

LOGISTICS MANAGEMENT

To store products safely and securely while in transit is a top priority. With the heat-sealed film keeping products compacted, more product can be loaded and shipped without packaging taking up valuable space.

Let's Get In Touch

Our team of experts work to show our customers how making the switch to Shrink Bundling Film will reflect faster line speeds, fewer roll changes, and reduced energy consumption.
